

IQAX Sailing Schedules API

Supply chain management is highly dependent on accurate and effective information sharing. The traditional practice of shippers and NVOCCs accessing sailing schedules online for planning requires a lot of manual effort to consolidate, distribute and maintain, and results in inefficient operations.

The IQAX Big Schedules Sailing Schedules API allows you to pull 27 ocean carriers' schedules into your internal systems for analytics dashboards and enterprise applications. Collect sailing schedule data by origin and destination pairs for the upcoming eight weeks and use the data in the way that works best for you.

IQAX ensures quality data by checking multiple sources and running algorithms to detect exceptions so that you can access the data with confidence and ease for your shipment planning.

We offer sailing schedule APIs in two packages to accommodate your needs.

Standard

12,000 calls/ month

High

30,000 calls/ month

3 Ways to Digitize Processes and Enhance Operations with APIs

Optimize Route Planning

- **Determine the best routes** based on your preferences, including ports and transit times, and your information such as minimum quantity commitments and rates

Save Time Looking Up the Latest Sailing Schedules

- **Save your logistics team hours** each week looking up possible schedules and making bookings by having the most current schedules through your internal platform

Automate the Quotation Process (NVOCCs)

- **Save countless hours** each day looking up, consolidating and updating sailing schedules for your in-house system so that you can scale your business
